Hi Jada,
That's exciting!! We will definitely allow your students to take our courses, as long as there is space. Every semester we have a wait list for CHDV 50433, so that one may be tricky. CHDV 50533 is a larger class offered every semester, so that one would be easier to offer to students. Both courses require a department permit, so please ask students to contact us for a number before advising appointments begin.
Thank you so much,
Casey

Jada, that seems manageable to me, but I am copying Dr. Casey Call, who heads up the KPICD's educational programs, for her input on this. Best wishes with your new program! David

> The Department of Nutritional Sciences is in the early stages of developing a stand-alone Master of Science degree in Nutrition. Almost all (~90%)of the courses in the proposed program are from the Nutritional Sciences Department. However, students would be

permitted to take up to six hours from other Departments across campus. We have identified courses in over one dozen departments that would be valuable to potential students in our program.

We anticipate 5-8 students yearly in the MS program. Their interests in the courses outside of our Department would likely be diverse with potentially 2-3 students in any non-Nutritional Sciences course at a time. Would you allow our NTDT MS in Nutrition students to choose electives from the following course in your Department?

CHDV 50443 – Trauma & Behavior
CHDV 50533 – Case Studies in Child Dev

Thank you for your consideration. I look forward to hearing from you.
