

ABOUT

# BROOKE NEWELL

Hey! I'm Brooke Newell and I am a senior from Louisville, Colorado. I'm majoring in Earth Systems Science with a specialization in Biogeochemistry. Within the Geology department, I am Assistant VP of the Geological Society, and I am a research assistant in Dr. Omar Harvey's Fundamental Research on Geomaterials and Geomimicry (FROGG) lab. I am also a member of the honors college and President of the Environmental Club. Originally on the pre-med track, I discovered during my sophomore year that I could combine my love for science and nature into one career path. I am currently in the process of applying for Ph.D. programs in earth/soil science. I am happy to chat about anything and everything, including discovering your passions, the graduate school process, getting involved at TCU, and your craziest outdoor adventures.
